

BIOENERGY

**Multidisciplinary and strategic legal practice
for renewable fuels businesses**

With the challenges surrounding global oil supply and the growing global importance of reducing carbon emissions, many local and foreign investors are turning their attention to the Brazilian renewable fuels industry. We participate in the most notable transactions in this industry, engaging in mergers and acquisitions and the development of new projects related to the production of sugarcane, ethanol, and energy from the combustion of the resulting biomass.

The specific characteristics of this market present a challenging environment for the entry of new participants regarding tax, labor, and environmental legislation, as well as contractual structures involving land ownership. In this sense, our experience in mergers and acquisitions, agribusiness, and energy has proven essential to operating in this market. Our multidisciplinary approach allows us to efficiently adapt to the profile of each transaction and the varying levels of sophistication of potential stakeholders.

MAIN SERVICES

- Comprehensive advisory services for strategic M&A transactions in the bioenergy sector.
- Legal advisory services for projects involving sugarcane, ethanol, and biomass.
- Regulatory and contractual consulting, focusing on tax, environmental, labor, and land ownership issues.
- Multidisciplinary approach, with legal solutions tailored to the profile and complexity of each transaction.
